

Students Achievements

I-ISRO EXPO

Our institution had the proud opportunity to host the ISRO Expo, an inspiring event that brought the world of space science and technology directly to our campus. The exhibition showcased models, mission details, satellite technologies, launch vehicle systems, and India's remarkable achievements in space exploration. Students gained valuable insights into real-time space missions, research advancements, and the future vision of India's space program.

A special highlight of the event was the recognition of our students as Temporary ISRO Ambassadors. This honour encouraged them to actively participate in spreading awareness about space science, innovation, and research among their peers. The initiative not only strengthened their understanding of aerospace technology but also instilled leadership, responsibility, and national pride.

Our students had the proud privilege of serving as hosts and student ambassadors at the prestigious ISRO Expo, an experience that went far beyond simple participation. They stood at the forefront of the event, welcoming dignitaries, faculty members, school and college students, and space enthusiasts with confidence and professionalism. From the very beginning of the expo until its successful conclusion, they played a vital role in ensuring the smooth coordination and effective management of the entire event. With official badges and communication headsets, they carried themselves with discipline and responsibility, reflecting the true spirit of leadership and teamwork.

As hosts, they guided visitors through various sections of the exhibition, provided clear instructions, maintained organized movement of crowds, and ensured that every guest felt comfortable and informed. They coordinated between technical experts and attendees, assisted in arranging demonstration sessions, and managed schedules efficiently. Their ability to communicate clearly, handle unexpected situations calmly, and maintain a welcoming attitude throughout the event showcased their maturity and professional growth. They demonstrated excellent interpersonal skills by interacting with people from different backgrounds, answering general queries, and creating a friendly and engaging atmosphere.

This hosting experience significantly enhanced their confidence, public speaking ability, event management skills, and sense of responsibility.

Students and faculty were given a special opportunity to share their ideas, project experiences, and learning outcomes through a live interview session with Suryan FM. This interaction allowed them to confidently present their technical knowledge, creativity, and passion for aerospace and space research to a wider audience.

Being part of the ISRO Expo was a valuable learning experience where we interacted with experts, observed real-time models, and gained deeper insights into India's achievements in space research. The exposure strengthened our understanding of aerospace engineering concepts and motivated us to aim higher in the field of science and innovation.
